Tasks
Project Title:
Dock & Yard Management (Sep 2025- current)

Description : A robust web-based application designed to streamline dock and yard logistics, enabling organizations to manage slot booking, vehicle tracking, dock utilization, and employee coordination efficiently. The platform enhances operational visibility, reduces delays, and provides secure user access across multiple modules.

● **Roles and Responsibilities –**

- Developed and consumed RESTful APIs for employee, dock, yard, and slot management modules using Spring Boot.
- Implemented JWT-based authentication and authorization to secure endpoints with role-based access control.
- Developed OTP generation and verification system for login and sensitive actions using email-based validation.
- Built Forgot Password flow with secure reset links and email triggers.
- Integrated device browser and location detection in the authentication module to log access metadata.
- Created dynamic and interactive frontend components using Angular, ensuring responsive UI/UX for slot booking and dashboard.
- Conducted API testing using Postman, validating all success/failure flows including login, locking, and reset operations.
- Used GitHub for version control and collaboration within a distributed team.
- Participated in code reviews, debugging, and optimization tasks for performance and scalability.

SKILLS

Java Angular SQL JPA API

JDBC Hibernate HTML

CSS Javascript React(Basics)

Spring Boot DBMS MySQL

PERSONAL PROJECTS

Ecommerce Web Application

Description : Designed and developed a high-performance eCommerce web application using Java, Spring Boot, Angular, and MySQL.

▢ Led front-end development for a responsive user interface and optimized the back end with RESTful APIs.

Technologies Used:
Backend: Java, Spring Boot, Spring Security, Hibernate
Frontend: Angular, TypeScript, HTML5, CSS3, JavaScript
Database: MySQL
API & Integration: REST APIs, JWT (JSON Web Token), OTP-based email authentication
Security: Spring Security, JWT, Email-based OTP
Tools: Postman (for API testing), GitHub (version control)
Other: JSON, Maven, Email Service Integration, Browser & Device Detection (via User-Agent parsing)

Objectives: I bring expertise in both front-end and back-end development, as well as a deep understanding of the full software development lifecycle. My proficiency in Java, Spring Boot, JavaScript, and a range of modern web technologies enables me to build robust, responsive, and feature-rich applications that meet business objectives.
